Nature House — bringing the benefits of nature to your house

#980000 Winch/Cable Conversion Kit

(Cable, top and bottom plate, screws, safety handle/clamp assembly, winch, cover and clamp.)

Directions to convert Nature House systems from rope-and-pulley to winch-and-cable

1. Use original pole, clamps and pulley.
2. Remove rope cleat and reinstall top rope cleat screw.
3. If no lanyard lock is installed, attach cable as shown.
- 3A. If lanyard lock is installed, it must be removed and replaced with the flat plate provided in this conversion kit. Cable can then be attached as shown at right.

4. Remove roof and replace top formed plate with the formed plate included with kit. Install cable through center of house at this time. Cable should go through top plate, around pulley, reenter the house through the top plate and come out through the flat plate installed on the bottom of house. This end is attached to the winch. At this time reinstall roof on house and the house on the post.
5. Install safety handle approximately two feet up onto the center post section. When house is reinstalled the safety handle should be at head height. When house is lowered to the safety handle, the safety handle is then lowered all the way to allow access to the house. When raising, reverse the procedure.
6. Reinstall post and house back into bottom post section and tighten clamps.
7. Attach cable to winch.
